UNIVERSITY OF TECHNOLOGY SYDNEY

Assignment 2 – Project Report & Presentation

Due Date: 11.59pm Friday, 16 October 2026

Presentation Date: In Workshop presentation.

Submission: Each group will prepare the group assignment 1 report along the contribution form and meeting minutes protocols using the provided templates and submit it as a softcopy (1 PDF file) via Turnitin before Friday 16 October 2026, 11:59 PM AEST. Use the Assessment item 1: Research Report Turnitin link (View / Complete) on Canvas for submitting your assignment. Your submission file title and name must follow the following pattern:

Assignment_1-<Your group ID>.pdf

Your group ID is made of your workshop (Wrk1) activity number and group lead student ID. For instance, if your Wrk1 activity number is 02 (see timetable for your activity) and group lead student ID is 12345678 then your submission file title/name must be worded as "Assignment_1-Wrk1-02-12345678.pdf",

For each group only one student (group lead) should submit the assignment on behalf of the whole group.

You must check your assignment Turnitin report and ensure that your work does not contain plagiarism. You may submit your assignment to Turnitin many times before the submission due date. Final Turnitin reports can be used as evidence by the teaching staff in the event that plagiarism is suspected in an assignment and will be dealt as per University rules. **Do not allow anyone to copy your solution – this is considered misconduct; all miscreants will receive a mark of 0, at best for the report and will be dealt with as per University rules**. You may be required to provide the hard or soft copy of the assignment anytime during the semester.

Marks: **40 %**

Groupwork: Group work, individually assessed

Word Limits: No hard word limit. Recommended: approx. 7500 words

Use the provided report template.

Method: Building on assignment 1, this assignment will be done in a group (preferable in the same workshop). Group sizes should be around 4-6 students (enrolment numbers and situation-specific circumstance will dictate the actual size of the groups). It is not the responsibility of the teaching staff to find a group in the beginning of the semester. Once the groups are formed and for any reason(s)

© Dr. Tobias Cibis 2026

you want to change the group, then it is solely your responsibility to make other arrangements and find other alternative group who is willing to accept you. This is a group assignment, and you must take the fair share of the work, respect other students in the same group, different groups, and teaching staff.

If you have any group issues, then you must inform your tutor as soon as possible and well before (at least 1 week or earlier) the assignment submission or due date. Group assignment issues reported on or after the assignment submission date may not be considered. There will be zero tolerance for any academic or non-academic misconduct. See University Rules, Subject Outline, and Academic Misconduct section of this brief for details.

Objectives:

- SLO1: Evaluate data design and management and its value in relation to supporting corporate stakeholder data resources. (B.1)
- SLO2: Design data models to support complex corporate stakeholder requirements. (C.1)
- SLO3: Create database systems and solutions to support a range of data types and structures to support complex queries and results. (D.1)
- SLO 4: Collaborate effectively in a team to address a practical data management problem and manage the problem to completion.

Criteria: The assignment will be assessed based on the following criteria.

Project Criteria Items	Marks	Weight
Coverage and quality of the advanced database solution design.	10	25%
Coverage and quality of the working prototype implementation using the Lab Environment. *Non-working prototype will get zero (0) marks.	20	50%
Effective communication (clear title, executive summary, introduction, overall report summary and quality, i.e., structure, gramma, clarity)	5	12.5%
Total	35	100%

Presentation Criteria Items	Marks	Weight
Clear presentation and articulation	2.5	6.25%
Correctness of answers to questions	2.5	6.25%
Total	35	12.5%

Task: The purpose of this task is to demonstrate that you can effectively apply the theoretical and practical concepts to successfully delivery an industry strength advanced database project as a team.

You will use material or case study problem and proposed solution as an input from your Assignment 1. Building on your proposition, this assignment task will require the same team of students to develop a report comprising an (1) advanced database solution design and (2) working prototype implementation using the provided Lab Environment for the problem and proposed solution. This will also include (3) an oral/visual presentation of the report/prototype.

The deliverable of this assessment task also includes an appendix (at the end of the report) containing the evidence of individual student's contribution to teamwork and communication (e.g. email communication, task allocated and performed by the individuals in the group assignment). You may self-assess your report (either HD, D, C, P, F) as a group using the UTS general grading guidelines (https://www.uts.edu.au/current-students/managing-your-course/classes-and-assessment/results/grading-schema-coursework).

Also provide attached individual contribution form for capturing the individual contribution rating using the provided template.

Students may choose to work in the lab or from home.

For each meeting (in-person or work-from-home), a meeting minutes report must be completed and attached to the report. Use the minutes template as provided on Canvas.

Project Task:

Your report should follow the following format/order (use the word template from Assignment 1 and tailor as per following sections below).

(i) Title of the report
(ii) Student Names (along with UTS Student ID)
(iii) Executive Summary (100-250 words)
(iv) Introduction – Overview of description of the problem that you are trying to solve with your project. That is, what are the high-level goals of the code that you have implemented in the Lab Environment (300-400 words)
(v) Solution Design (No words limit)
    a. Solution Architecture
    b. Conceptual Model of Data Entities
    c. Logical Data Model of Data Entities

© Dr. Tobias Cibis 2026

d. Design Rational (why you choose the given design, e.g., use case fit, performance, complexity, cost)
e. Design Trade-offs

(vi) Working Prototype Implementation using the provided Lab Environment (No words limit)
a. Databases and schemas of source systems (at least 3 data sources)
b. Integrated data warehouse databases and schema (at least 1)
c. SQL Scripts with synthetic data for creating databases, schemas, extracting data from source systems and transforming/loading into the data warehouse. This should be fully commented, ready for execution without errors. This should be clearly mapped to the solution design components.
d. Reports and dashboard as per data use case (at least 3) for your project with synthetic data.
e. End-to-end testing and provide a link in the report to access a recorded end-to-end testing demo video of the working prototype. You may post video demo to your GitHub or YouTube.

(vii) Report Summary/Conclusion (200-300 words)
a. Present an overall summary of the contents presented in this report about the design and implementation.

(viii) Appendix (No Limit)
a. Include an appendix (at the end of the report) containing the evidence of individual student's contribution (contents from individuals' contribution logbooks) to teamwork and communication (e.g., email communication, tasks allocated, performance by the individuals in the group assignment), and the meeting minutes (at least 3, signed by teacher).

Presentation Task:

This assessment task includes an oral/visual presentation (e.g., PowerPoint) of the project report and prototype. Each team member must participate in the presentation. Each presentation is expected to last approx. 10 minutes, and a maximum of no more than 15 minutes, followed by approx. 10 minutes of questions. Each team member must be able to answer any question about the report/prototype, regardless if it was their assigned contribution portion or not.

Assessment and Feedback:

Each student in a group assessment is expected to take a fair share of the work. For the group work and individual assessment in this Subject, each group is required to submit the individual group member contribution (along supporting evidence as noted in the appendix) rating between 0–100% (see example below) using the contribution form. This will be multiplied to the overall group marks to assign individual marks for assignment 1. This is to ensure the fair

© Dr. Tobias Cibis 2026

distribution of individual marks based on the individual student's contribution to the group work. Feedback on marked assignments will be within 2 weeks after the assignment due or submission date.

Student ID	Name	Individual Contribution (0-100%)
1234567	John Smith	100
7652311	Jo Smith	90
9278459	Jane Doe	100

Individual Contribution Rating Scale:

WB:	Well Below Average	0 – 20 %
BA:	Below Average	20 – 40 %
AV:	Average	40 - 60 %
AA:	Above Average	60 - 80 %
WA:	Well Above Average	80 – 100 %

Minimum Requirements

See Subject outline.

No conceded passes are to be granted due to University Policy

Referencing Standards

All material derived from other works must be acknowledged and referenced accordingly using Harvard Referencing Style (see: http://www.bell.uts.edu.au/referencing/harvard_system). You must not use GenAI and/or other similar applications to produce this report.

Late Penalty

See Subject outline

Special Consideration

Special consideration, for late submission, must be arranged beforehand with the subject coordinator (**email: tobias.cibis@uts.edu.au**).

Special considerations must follow the UTS Special Consideration Process:

http://www.sau.uts.edu.au/assessment/consideration

Special Needs:

© Dr. Tobias Cibis 2026

Students should email the subject coordinator as soon as possible (and prior to the assessment deadline) to make them aware of the impact on them meeting assessment components / requirements, and that they are seeking assistance through UTS Special Needs as detailed in Section 5.1.3 of Procedures for the Assessment of Coursework Subjects.

Academic Misconduct:

See Subject outline.

Querying Marks / Grades and Final Results

See Subject outline.
